## Customer Reviews

This is an excellent book for those of us who live in "transitional" zones for planting in the Southwest. The editor, Diane Maranhao, has done a tremendous job in setting straight such important issues as soil types and planting the right plants for the right places (i.e. soil types, temperatures, sun/shade). I highly recommend this book for anyone in the Southwest or arid climates.

This is a nice little book, but too general for Arizona planting. There is good information about HOW

to plant, but a very limited selection of actual plants illustrated. I was spoiled by the free material from the classes provided by the city governments here. I figured the book would expand on the classes I took, and it doesn't. If you can't take a water management class, this is a nice book if you're on a limited budget. I would spend more for something larger, and more specific if possible, if I were you.

I moved to AZ from another part of the country and found the vegetation here confusing. This book has helped me tremendously in picking out appropriate plants for my garden. The book does not cover all desert plants/trees but ones that are deemed "water wise". I found it helpful that the authors also cited plants that would compliment the one that was being discussed. This is very useful when planting or planning your own garden. I was able to group things according to their recommendations. I continue to use this book on a yearly basis to review water and various information to keep my plants growing and healthy throughout the summers and the winters in AZ.
