My favorite kind of plant is perennials, and this book focuses exclusively on those. Perennials are the plants that come back year after year. This is a great book for people who want to plant decoratively but have no idea where to start. Perennials are easy to care for, and you don't have to buy new plants every year. Most perennials will get fuller and spread as time goes on, so a sparse initial planting will fill out nicely in the following years make them even more practical. The perennials used aren't new plants, they are tried and true classic garden flowers that have been time tested. The author has picked plants that handle a wide range of zones pretty well. She also includes a map with a legend of zones so you can figure out which zone you live in. She also has plans and plants for other variables. So if you have an area that's not getting full sunlight, but you still want to plant something there- you can. If you have a really wet corner of your yard, like where a drain spout pours off- there are plants that like the damp conditions and will thrive. There are tips, zone information on the plants and a lot of information about how to get started with growing a

garden. It's clear, simple, and very easy to understand. There is information about the different kind of plants, and Latin names are included. The "Digging Deeper" tips offer ways to expand on the original plan, and do a bit more. If you're a beginning gardener, or someone who wants some nice looking plants growing in your yard but don't know where to start, this is a great place. The photographs of the plants are very well done and will help you pick the perfect theme for your garden. The illustrations of the gardens are also beautiful.
