I'm a major bird lover and I have bird feeders set up around my house that have been successful to varying degrees. However, I decided this spring to turn a simple interest in birds to an all out hobby, and turn my simple yard with modest bird feeders into a practical reserve for birds of all sorts. While I'd classify myself as somewhat knowledgeable as to what birds like and need, I'm by no means an expert. So I started out on looking for a book that was simple enough for me to understand, but not so basic I'd be bored. And since money is a big factor, I wanted to find a book that suggested money-friendly ideas that were practical, not overblown ideas that were a major investment. This book fills that niche perfectly. This book contains activities, projects, and tips that are easy to understand and extremely well written. There are activities in this book that are exceedingly simple (yet unbelievably effective) and other projects that are slightly more complex, but not so daunting that you are in danger of being overwhelmed. In fact, while this book is written for adults, I can't think of an activity in it that isn't something you could do with your children... Some activities I think your children could do quite well by themselves! This book is completely comprehensive, with a really good and equal spread of activities and ideas (meaning you won't pick up this book and find 100 different plans for birdhouses) in areas like bird feeders, houses, feeding stations, bird environments, planting for birds, bird food, water features for birds, to name a few.
